

# Animals including humans

## What I will learn.

- describe the simple functions of the basic parts of the digestive system in humans
- identify the different types of teeth in humans and their simple functions
- construct and interpret a variety of food chains, identifying producers, predators and prey.

## Vocabulary

Tier 2 multiple meaning or high frequency		Tier 3 subjective specific	
<b>permanent</b> 	lasting or intended to last or remain unchanged indefinitely	<b>food chain</b> 	a series of organisms each dependent on the next as a source of food
<b>stomach</b> 	an internal organ and part of the digestive system		is a connection of multiple food chains within a habitat
<b>producer</b> 	plants and algae produce their own energy without consuming other organisms	<b>digestion</b> 	is the process of turning food you eat into nutrients
<b>consumer</b> 	eats producers and/or other consumers	<b>digestive system</b> 	a series of organs joined together by a hollow tube from the mouth to the anus
<b>teeth</b> 	a tooth is a hard, calcified structure found in the jaws (or mouths) used to break down food called incisors, canines or molars	<b>predator</b> 	animals that lives by killing other animals
		<b>prey</b> 	animals that are hunted by other animals

What do we know already?

What do we want to find out or learn about?
