

Living Things and their Habitats

What I will learn.

- explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment
- recognise that environments can change and that this can sometimes pose dangers to living things

Vocabulary

Tier 2 multiple meaning or high frequency		Tier 3 subjective specific	
survive	to continue to live especially in spite of danger or hardship	environment	surroundings where plants, animals and other living things lives or operates
danger	the possibility of suffering harm or injury	organisms	an individual animal, plant or single-celled life from
non-living	things that are not alive and have never been alive	reproduction	all living things reproduce, people and animals have babies, plants produce seeds
living	living things are things that are alive. People, animals and plants are living things. Living things need a few things to stay alive such as air, water, and food.	nutrition	the necessary food for health and growth
growth	people and animals have babies who grow into adults. Plants produce seeds which grow into plants.	habitat	the natural home of a plant, human or other living things for example: deserts -rainforests -woodlands -oceans -seashore -forest -grassland -meadow
changes	changes in the temperature, rainfall, sea level, droughts, floods, or storms that may impact an environment	respiration	the action of breathing
